SUMMARY

Shopify Developer with over three years building for the web (nearly two at a US Shopify agency). Since Dec 2024 I work remotely, in English, on Shopify Plus stores for US brands: custom Online Store 2.0 themes in Liquid with Vite and Web Components, catalog migrations with metafields, Python, Matrixify and the GraphQL Admin API, app integrations (Seal Subscriptions, Searchanise, Klaviyo), WCAG accessibility, and maintenance on Hydrogen/Oxygen storefronts (React). Client-facing: I work directly with clients, designers and third-party app developers.

EXPERIENCE

Frontend / Shopify Developer — Progress Labs Dec 2024 – Present

US Shopify agency · Remote · Contractor · English-speaking team · Git with pull requests

- **Memory Air:** Lead developer (56 of 60 merged PRs) of a custom Shopify Online Store 2.0 theme: Liquid sections and blocks, Tailwind CSS 4, Vite and ~35 vanilla-JS Web Component islands with lazy hydration; built home, product, Science and Wholesale pages from low-fidelity wireframes and proposed UI alternatives the design team adopted.
- **Memory Air:** Built the membership add-to-cart logic with Seal Subscriptions (product parent + membership child) to close a flaw that let buyers purchase the membership without the product; contained it with injected scripts while shipping the permanent fix.
- **Savory Spice:** Migrated the full Shopify Plus catalog to a new theme: ~115 metafields across 400+ products plus recipes, blogs, collections and store locations, automated with Python and Matrixify (28 merged PRs). Delivered at least 15% faster load times, integrated the Searchanise search API with the vendor's developers, and replaced manual JSON configuration with product-picker sections.
- **Leaf Shave:** Audited 54 pages with axe DevTools (2,000+ WCAG issues, 49 critical) and fixed every code-solvable issue (contrast, keyboard, ARIA, accessible names, target size) plus SEO fixes; got third-party app developers to add aria-labels to their injected widgets (11 PRs).
- **Polly Wales:** Implemented deep links to specific page sections and FAQs for social sharing; my first autonomous project, working directly with the CEO.
- **Tooling:** Shopify CLI daily: theme dev running alongside Vite via concurrently, build + theme push deploy scripts, selective theme pull of JSON templates, sections and settings, and custom per-store console scripts. GraphQL Admin API for product data management.
- **Also:** Configured Klaviyo flows and integrations; maintained Hydrogen/Oxygen storefronts in React (JSX, hooks, state).

Full-Stack Developer — Qualy labs Aug 2023 – Nov 2024

Software consultancy · Puebla, México · Front end, back end and direct client contact

- Gathered requirements with a local business owner and built a Java desktop inventory app for hundreds of products, with Python data-loading scripts.
- Automated a client's daily form-filling with macros, a browser extension and Python scripts, cutting a ~1-hour process to minutes.

Freelance Web Developer (part-time) 2022 – Present

- Responsive HTML/CSS landing pages for small local businesses and web event invitations, alongside my employment.

SKILLS

Shopify: Shopify Plus, Liquid, Online Store 2.0 (sections, blocks), metafields, product pickers, Shopify CLI, Theme Check, Matrixify

APIs & Apps: GraphQL Admin API (product data), Searchanise API, Seal Subscriptions, Klaviyo (flows, integrations)

Frontend: JavaScript, TypeScript, Web Components, HTML, CSS, Tailwind CSS, Vite, React (Hydrogen/Oxygen maintenance: JSX, hooks, state)

Quality & Workflow: WCAG, ARIA, axe DevTools, on-page SEO, Core Web Vitals, Git/GitHub (PRs, reviews), Figma

EDUCATION & LANGUAGES

B.Eng. in Computer Science Engineering: BUAP, 2017–2023 · Graduated · GPA 9.2/10

English: B2 certified (Cambridge, 2018); daily written and spoken use with US clients and teams. Spanish: native.

Community & Certs: Organizer, PyTalavera (Python community, Puebla) and PyDay México 2026 · Oracle ONE – Back-End (2022)
